

# AI Readiness & Safety Checklist

Use a small, age-appropriate coding project to discuss these six skills with your child. No AI account is required to complete this conversation.

Child: \_\_\_\_\_ Date: \_\_\_\_\_

**1. Computational thinking** Can they turn a goal, such as a quiz game, into clear steps before asking a tool for help?

---

Independent / With guidance / Next skill to build

**2. Problem-solving** Can they describe what is wrong, suggest an approach, and try a simpler example?

---

Independent / With guidance / Next skill to build

**3. Reading and judging code** Can they explain a short piece of code and test whether it does what they intended?

---

Independent / With guidance / Next skill to build

**4. Creativity and purpose** Can they name a problem worth solving and explain who their project would help?

---

Independent / With guidance / Next skill to build

**5. Resilience and adaptability** Can they revise a plan when a first attempt fails, and describe what they learned?

---

Independent / With guidance / Next skill to build

**6. Understanding AI** Can they explain that generated answers can be wrong and name a way to check them?

---

Independent / With guidance / Next skill to build

# AI Readiness & Safety Checklist

Make a family plan before using an AI tool. Revisit it together as your child's projects and independence grow.

## Safety and learning habits

|                                                                                                                      |                  |
|----------------------------------------------------------------------------------------------------------------------|------------------|
| 1. An adult checks the tool's age requirements, account settings, and suitability before approving use.              | Agreed / Discuss |
| 2. We avoid sharing passwords, contact details, school information, private photos, or other people's personal data. | Agreed / Discuss |
| 3. We use invented names and sample data when experimenting.                                                         | Agreed / Discuss |
| 4. We check important claims and test generated code instead of assuming it is correct.                              | Agreed / Discuss |
| 5. An adult or mentor reviews unfamiliar code, links, and downloads before they are used.                            | Agreed / Discuss |
| 6. We use hints and explanations to learn, and follow school rules about AI assistance and attribution.              | Agreed / Discuss |
| 7. We pause and tell a trusted adult if a tool produces upsetting content or asks for something uncomfortable.       | Agreed / Discuss |
| 8. We agree on where, when, and with whom AI tools may be used, and review what was learned.                         | Agreed / Discuss |

Approved activity / supervising adult:

---

How we will check the output / when we will review:

---

A useful closing question: **"What do you understand now that you did not understand before using the tool?"** Keep the explanation, not just the generated output, at the center of learning.
