

Coding Readiness Checklist

Find a starting point by what your child can do today. Use a recent project or short activity, and ask them to explain their thinking.

Child: _____ Date: _____

Observe together

For each item, circle: Independently / With help / Not yet. Add one concrete example.

Reading and typing. Can they read short instructions and type a few lines without the mechanics taking all their attention?

Independently / With help / Not yet

Sequencing and logic. Can they explain a sequence, a repeated action, and an "if this, then that" choice?

Independently / With help / Not yet

Previous experience. Can they show a project and explain what they built themselves?

Independently / With help / Not yet

Debugging. When a project behaves unexpectedly, can they describe what happened and try a small change?

Independently / With help / Not yet

Interest and challenge. What do they want to build next? Are current activities interesting, frustrating, or too easy?

Independently / With help / Not yet

A project or activity my child would love to try:

Coding Readiness Checklist

Choose a trial starting point. These stages guide a conversation; they are not age deadlines or a race.

1. Foundations

New to coding or still building reading, typing, and logic. Try visual blocks: create a short animated story, then explain its steps.

2. Real code

Comfortable with core logic and ready to type. Try a small Python quiz or guessing game. Notice whether they can explain variables and choices.

3. Web development

Can write and debug basic programs with growing independence. Try a personal page with a button or form that responds to a user.

4. Professional tools and AI

Comfortable building working applications. Explore a larger project involving data, version control, or guided AI experiments, with a mentor.

Our starting-path plan

Stage to try and evidence behind that choice:

One foundation to strengthen / one project to attempt:

Try a small project, then review how much support was needed. Adjust the level to keep challenge manageable and curiosity alive. Discuss your observations at ritetutor.com/contact.
