

# Python Readiness Check

Review all 12 signs with your child. Mark each as Yes, Sometimes, or Not yet. Use the pattern of answers to plan support; there is no required total.

Child: \_\_\_\_\_ Date: \_\_\_\_\_

## Foundations

|                                                           |                           |
|-----------------------------------------------------------|---------------------------|
| 1. Understands sequences, loops, and simple conditionals. | Yes / Sometimes / Not yet |
| 2. Reads short instructions comfortably.                  | Yes / Sometimes / Not yet |
| 3. Types simple text without constant difficulty.         | Yes / Sometimes / Not yet |
| 4. Explains why a block-based project behaves as it does. | Yes / Sometimes / Not yet |

## Readiness for a new challenge

|                                                           |                           |
|-----------------------------------------------------------|---------------------------|
| 5. Completes familiar block-based projects with ease.     | Yes / Sometimes / Not yet |
| 6. Seems bored by activities that used to be exciting.    | Yes / Sometimes / Not yet |
| 7. Imagines projects beyond the limits of current blocks. | Yes / Sometimes / Not yet |
| 8. Repeats similar projects and wants something new.      | Yes / Sometimes / Not yet |

## Motivation

|                                                         |                           |
|---------------------------------------------------------|---------------------------|
| 9. Asks how real apps, games, or websites are built.    | Yes / Sometimes / Not yet |
| 10. Wants to type code instead of only dragging blocks. | Yes / Sometimes / Not yet |
| 11. Is curious about how technology works.              | Yes / Sometimes / Not yet |
| 12. Keeps trying when a project needs fixing.           | Yes / Sometimes / Not yet |

# Python Readiness Check

Try a short, supported activity. The aim is to observe curiosity, understanding, and the kind of help that makes the transition work.

## A small first Python activity

With an adult or mentor, open a suitable Python editor and try the example below. Talk through each line before changing it.

```
name = "Alex"  
print("Hello, " + name)
```

**Try 1.** Predict what will appear when the program runs. What does name store?

---

**Try 2.** Change the name and the greeting. Run the program and explain what changed.

---

**Try 3.** If something goes wrong while editing, read the message together. Can they compare the code with the working example?

---

## Read the overall picture

**Foundations and motivation are present:** try a supported beginner Python project.

**Interest is strong but typing or reading takes effort:** add support and keep early programs short.

**Core logic is still unclear:** strengthen it through playful block-based projects and revisit.

Support my child needs for the transition:

---

Next small project / date to review:
